Thank you for your purchase.

Tools needed:
- Level
- Stud finder
- Phillips screwdriver
- Allen wrench
- Mallet
- Screws
- Nails
- Pliers
- Power drill

Parts included:
- 4 Plastics anchors (for dry wall only)
- 4 Phillips screws
- A plastic wrench

Step 1: Use 4 Phillips screws to insert the plastic anchors. Do not push or drive anchors into the wall. They are designed to hold into the wall like a drill bit. After the anchors are driven into holes in the wall, drive the screws with Allen wrench until they touch the wall. Slowly turn the anchors clockwise while applying pressure until the anchor just touches the wall. Precisely install all wall plastic anchors and attach stud 16 T2.2 onto high tension metal screws. Tighten screws with a Phillips screwdriver.

Step 2: Use a level or measure up from the floor at each mark to ensure the bar will be level.

Step 3: Pre-assemble Coll 16 T2.2 with a panel, mark on the wall the screw whole.

Step 4: Remove from wall. These marks will be used to determine the location. Remove the panel, wipe with a soft, dry cloth. To protect the finish, do not use household cleaners or abrasives.

Care instructions:
- Wipe with a soft, dry cloth. To protect the finish, do not use household cleaners or abrasives.
- Tighten screws with a Phillips screwdriver.
- Secure by driving set screws clockwise with Allen wrench until tight then anchor directly into the wall and attach the Coll 16 T2.2 onto anchor.

Note:
- For safe mounting, it is essential to use the proper hardware for your wall type.
